Product Description

Ceramic Foot Smoother by Ultra Implements is made in Korea and is a great tool for reducing calluses and smoothing rough skin. If you like using a pumice stone, but find it difficult to reach every part of your foot, this tool could be just what you're looking for! The long-lasting, double-sided ceramic stone is tough on calluses and features a contoured handle to help you smooth those hard-to-reach areas of the feet.

For Professional Results: Use both sides of this tool to smooth tough calluses and exfoliate dry skin. It can be used wet and dry!
