Product Description

Skin Care Tool by Ultra Implements is made in Germany of high quality Stainless Steel so you can disinfect it and keep it rust-free. This handy tool is great for helping you to keep blemishes at bay and, since it can be sterilized, it keeps problem-causing bacteria on your hands away from your face too! The small, thin loop is perfect for gently rolling out whiteheads, and the flat loop gently presses out blackheads so your face will look its clean and radiant best! For Professional Results: Wash skin and the tool. Center the thin, angled loop over the whitehead and gently push down with even pressure while moving the loop over the blemish. Center the flat loop over the blackhead and gently press down over the blemish.
