Product Description

Refectocil's new tinting pens are ideal for brow touch ups between services, vacations or last-minute meetings.

HOW TO APPLY

1. Prepare + cleanse - If you wear contact lenses, remove them first. Now cleanse your eyebrows with an oil-free eye make-up remover. For best results, make sure the brow hairs are dry and free of oil.
2. Apply gel 1 - Open the white pen and twist until the tip of the brush is covered with gel. Now apply the gel directly to your eyebrows. All hairs should be completely wet. Leave it on for 2 minutes for the gel to be absorbed by the hair.
3. Remove Gel 1 - After 2 minutes, remove the remaining gel 1 with a dry cotton swab or tissue. To protect the skin from staining - The Gel 2 applied in the next step will stain the skin on contact. To protect your skin from unwanted staining, we recommend using kajal or oil cream. Simply outline the eyebrows with it. Avoid touching the brow hairs while doing this to ensure that the Gel 2's effect isn't neutralized.
4. Apply Gel 2 - Open the blue pen and twist until the tip of the brush is covered with the gel. Apply Gel 2 precisely with the tip of the brush. The hair should be completely covered with gel from roots to tips. Leave it on for 1 minute.
5. After one minute, remove Gel 2 with a damp cotton pad. The colouring lasts for several weeks. Tip: If the skin around the brows get stained, use the Tint Remover to remove the stain.

CONTENTS

For at least 20 applications.
