Product Description

Folding Eyelash Comb by Ultra Implements is made in Japan and features the pointed, slim metal teeth preferred by professionals. The comb glides effortlessly through lashes to separate, define and eliminate mascara clumps. The unique, folding design protects the comb and makes it great for home use or travel.

For Professional Results: Apply mascara to lashes. Position the tips of the eyelash comb at the base of the lashes (the underside) and gently glide the metal teeth upward through the wet lashes to separate and define. Repeat mascara application and combing. To avoid pulling and damaging lashes, do not wait until mascara dries to begin combing.
