Product Description

#18 Callus Softener by Footlogix instantly and effectively softens the skin prior to filing to repair and improve the texture of dry skin. Shortens pedicures by reducing filing time. Sprayer allows for hygienic application.
Direction Of Use: Spray around toe nails, cuticles, and callused areas from a distance of about 4 inches (10cm). Allow product to penetrate for about 2 to 5 minutes. Time will vary depending on the severity of the dry skin build-up. Once the skin is no longer wet but still slightly tacky, begin filing. Do not wash the product off as it will continue to hold and retain moisture long after the pedicure is finished. Repeating application as necessary to soften the callused area.
